A new series of bespoke, full-coverage resources developed for the 2015 GCSE Mathematics qualifications. Endorsed for the OCR J560 GCSE Mathematics Foundation tier specification for first teaching from 2015, our Homework Book is an ideal companion to the OCR Foundation tier Student Book and can be used as a standalone resource. With exercises that correspond to each section of the Student Book, it offers a wealth of additional questions for practice and consolidation. Our Homework Books contain a breadth and depth of questions covering a variety of skills, including problem-solving and mathematical reasoning, as well as extensive drill questions. Answers to all questions are available free on the Cambridge University Press UK Schools website. Make teaching and learning mathematics relevant and enjoyable with the best-known Primary mathematics series in the Caribbean updated and revised for the 21st Century by practising teachers, with a new focus on self-directed learning, problem-solving and raising standards. - Ensure all requirements of primary schools in all Caribbean territories from kindergarten to primary school exit examination level are covered. - Engage students and make maths more relevant with real-life situations used throughout the book, including the front cover,

showing Mathematics in action. - Reinforce knowledge and encourage progression with Assessment Bank, available separately to compliment the topics covered in this series. - Encourage students to understand and build their own learning with all key skills and concepts clearly introduced in sequence, demonstrating links between mathematical strands and other curriculum subjects. Drawing upon over 40 years of experience, the authors of Statistics, 11th Edition provide students with a clear and methodical approach to essential statistical procedures. The text clearly explains the basic concepts and procedures of descriptive and inferential statistical analysis. It features an emphasis on expressions involving sums of squares and degrees of freedom as well as a strong stress on the importance of variability. This accessible approach will help students tackle such perennially mystifying topics as the standard deviation, variance interpretation of the correlation coefficient, hypothesis tests, degrees of freedom, p-values, and estimates of effect size. New National Framework Mathematics features extensive teacher support materials which include dedicated resources to support each Core and Plus Book. The 8 Core Teacher Planning Pack contains Teacher Notes for every chapter with a 'Self-contained lesson plan' for each of the units in the pupil books. BEGINNING AND INTERMEDIATE ALGEBRA: CONNECTING CONCEPTS THROUGH APPLICATIONS, shows students how to apply traditional mathematical skills in real-world contexts. The emphasis on skill building and applications engages students as they master algebraic concepts, problem solving, and communication skills. Students develop sound

mathematical skills by learning how to solve problems generated from realistic applications, instead of learning techniques without conceptual understanding. Authors Mark Clark and Cynthia Anfinson have developed several key ideas to make concepts real and vivid for students. First, the authors place an emphasis on developing strong algebra skills that support the applications, enhancing student comprehension and developing their problem solving abilities. Second, applications are integrated throughout, drawing on realistic and numerically appropriate data to show students how to apply math and to understand why they need to know it. These applications require students to think critically and develop the skills needed to explain and think about the meaning of their answers. Third, important concepts are developed as students progress through the course and overlapping elementary and intermediate content is kept to a minimum. Chapter 8 sets the stage for the intermediate material where students explore the eyeball best-fit approach to modeling and understand the importance of graphs and graphing including graphing by hand. Fourth, Mark and Cynthia's approach prepares students for a range of courses including college algebra and statistics. In short, **BEGINNING AND INTERMEDIATE ALGEBRA: CONNECTING CONCEPTS THROUGH APPLICATIONS** develops strong mathematical skills using an engaging, application-driven and problem solving-focused approach to algebra. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. The **FUNDAMENTALS OF MATHEMATICS, Tenth Edition**, offers a

comprehensive and objectives-based review of all basic mathematics concepts. The authors prepare students for further coursework by addressing three important student needs: 1) establishing good study habits and overcoming math anxiety, 2) making the connections between mathematics and their modern, day-to-day activities, and 3) being paced and challenged according to their individual level of understanding whether right out of high school or returning to school later in life. The clear exposition and the consistency of presentation make learning arithmetic accessible for all. Key concepts presented in section objectives and further defined within the context of How and Why provide a strong foundation for learning and lasting comprehension. With a predominant emphasis on problem-solving skills, concepts, and applications based on real world data (with some introductory algebra integrated throughout), this book is suitable for individual study or for a variety of course formats: lab, self-paced, lecture, group, or combined formats. Advancing Quantitative Methods in Second Language Research is the first hands-on guide to conducting advanced

research methods in the fields of applied linguistics and second language studies. While a number of texts discuss basic quantitative research methodology, none focus exclusively on providing coverage of alternative advanced statistical procedures in second language studies from a practical approach. The text is bookended by discussions of these advanced procedures in the larger context of second language studies, debating their strengths, weaknesses, and potential for further research; the remaining chapters are how-to sections, each chapter following the same organization, on a wide variety of advanced research methods. By offering much-needed coverage on advanced statistical concepts and procedures, with an eye toward real-world implementation, *Advancing Quantitative Methods in Second Language Research* enhances the methodological repertoire of graduate students and researchers in applied linguistics and second language studies. BEGINNING ALGEBRA: CONNECTING CONCEPTS THROUGH APPLICATIONS shows students how to apply traditional mathematical skills in real-world contexts. The emphasis on skill building and applications engages students as they master algebraic concepts, problem solving, and communication skills. Students learn how to solve problems generated from realistic applications, instead of learning techniques without conceptual understanding. The authors have developed several key ideas to make concepts real and vivid for students. First, they emphasize strong algebra skills. These skills support the applications and enhance student comprehension. Second, the authors integrate applications, drawing on realistic data to

show students why they need to know and how to apply math. The applications help students develop the skills needed to explain the meaning of answers in the context of the application. Third, the authors develop key concepts as students progress through the course. For example, the distributive property is introduced in real numbers, covered when students are learning how to multiply a polynomial by a constant, and finally when students learn how to multiply a polynomial by a monomial. These concepts are reinforced through applications in the text. Last, the authors' approach prepares students for intermediate algebra by including an introduction to material such as functions and interval notation as well as the last chapter that covers linear and quadratic modeling. This updated and expanded edition of *Persuasive Communication* offers a comprehensive introduction to persuasion and real-world decision making. Drawing on empirical research from social psychology, neuroscience, business communication research, cognitive science, and behavioral economics, Young reveals the thought processes of many different audiences—from investors to CEOs—to help students better understand why audiences make the decisions they make and how to influence them. The book covers a broad range of communication techniques, richly illustrated with compelling examples, including resumes, speeches, and slide presentations, to help students recognize persuasive methods that do, and do not, work. A detailed analysis of the emotions and biases that go into

decision making arms students with perceptive insights into human behavior and helps them apply this understanding with various decision-making aids. Students will learn how to impact potential employers, clients, and other audiences essential to their success. This book will prove fascinating to many, and especially useful for students of persuasion, rhetoric, and business communication. CRYSTAL-Alberta was established to research ways to improve students' understanding and reasoning in science and mathematics. To accomplish this goal, faculty members in Education, Science, and Engineering, as well as school teachers joined forces to produce a resource bank of innovative and tested instructional materials that are transforming teaching in the K-12 classroom. Many of the instructional materials cross traditional disciplinary boundaries and explore contemporary topics such as global climate change and the spread of the West Nile virus. Combined with an emphasis on the use of visualizations, the instructional materials improve students' engagement with science and mathematics. Participation in the CRYSTAL-Alberta project has changed the way I think about the connection between what I do as a researcher and what I do as a teacher: I have

learned how to better translate scientific knowledge into language and activities appropriate for students, thereby transforming my own teaching. I also have learned to make better connections between what students are learning and what is happening in their lives and the world, thereby increasing students' interest in the subject and enriching their learning experience.
