Internecline Feb 18 2022

"Smart, scathing, and verbally inventive to an astonishing degree, David J. Schow is one of the most interesting writers of his generation."—Peter Straub "Inter-what?" When advertising executive Conrad Maddox returns from a redeye flight and finds a mysterious locker key waiting in his rental car, he discovers a briefcase loaded with guns and money. Several hours later, his entire life tumbles down a rabbit hole when he meets Dandine, owner of the case and former contract assassin for a shadowy organization called Norco, which is now out to nail both of them. "Internecline" means conflict, mutual destruction, and slaughter—or, as Dandine tells Conrad, they are now inadvertently at play in a field of "terrorism, counter-assassination, military coups, dirty tricks, Watergate, spy vs. spy, murky secret

organizations, that sort of thing." A world in which being innocent can't save you, the police can't help you, and your only hope of getting out alive is to risk unheard-of dangers against opponents with nearly unlimited power. To free themselves from the spider web of black ops, murder, madness and betrayal, Dandine and Conrad must delve ever-deeper into the spiraling, dangerous maze that is Norco, where everyone seems to be in on the most lethal of games...except you.

Ontologies for Agents: Theory and Experiences Oct 02 2020

The volume aims at providing a comprehensive review of the diverse efforts covering the gap existing between the two main perspectives on the topic of ontologies for multi-agent systems, namely: How ontologies should be modelled and represented in order to be effectively used in agent systems, and on the other hand, what kind of capabilities should be exhibited by an agent in order to make use of ontological knowledge and to perform efficient reasoning with it. The volume collects the most significant papers of the AAMAS 2002 and AAMAS 2003 workshop on ontologies for

agent systems, and the EKAW 2002 workshop on ontologies for multi-agent systems.

Historical Linguistics Dec 24 2019 This accessible, hands-on text not only introduces students to the important topics in historical linguistics but also shows them how to apply the methods described and how to think about the issues; abundant examples and exercises allow students to focus on how to do

historical linguistics. Distinctive to this text is its integration of the standard topics with others now considered important to the field, including syntactic change, grammaticalization, sociolinguistic contributions to linguistic change, distant genetic relationships, areal linguistics, and linguistic prehistory. Examples are taken from a broad range of languages; those from the more familiar English, French, German, and Spanish make the topics more accessible, while those from non-Indo-European languages show the depth and range of the concepts they illustrate. This second edition features expanded explanations and examples as well as updates in light of recent work in linguistics, including a defense of the family tree model, a response to recent claims on lexical diffusion/frequency, and a section on why languages diversify and spread.
